## Intralogic V9 Overview

### About Weblogics

Weblogics is a provider of web based applications, business intranets, portals and services. Its flagship product, Intralogic, provides powerful out-of-the-box web based knowledge portal (intranet, extranet, internet portal) and requires no programming, yet is infinitely flexible and scaleable. Weblogics is an Australian company with a proud 19 year track record of success and customer satisfaction.

Weblogics was formed in 1991 to provide services for diverse businesses, and to specialise in the design and development of database driven web applications for business.

Weblogics focus is on delivering solutions to large multi-brand and/or geographically displaced organisations, with off-the-shelf, flexible business intranets that require no programming.

Weblogics used its expertise in Information management, knowledge management and business process automation, together with expertise in web application design and development to create Intralogic, our world class knowledge management workflow product. Intralogic was launched in Australia in the year 2000 and is now in its ninth release.

In 2008, Weblogics introduced Blueprint, a natural extension of the Intralogic platform designed specifically for engineering and construction. In addition to Intralogic's core knowledge management tools,

Today, Weblogics continues to create web-based intranets and extranets, streamlining access to information and business processes, and increasing productivity for your staff, your customers and your partners.

## Intralogic V9 Overview

### Intralogic Overview

Intralogic is a business intranet that captures, manages and provides safe, secure access to your organisation's information and knowledge.

Intralogic incorporates a suite of applications that work together seamlessly to deliver a complete knowledge management platform: Intranet/Extranet/Portal, Content Management, Document Management, Online Forms Management, People Management, Business Workflow Management, Enterprise Searching.

In addition, Intralogic includes additional tools, all fully integrated components such as Bulk Email, Online

Surveys, Event Management, Contact Management, Facilities Management, Communities Management, Usage Statistics, B2B facilities, Classified Ads, Chat Rooms, Bulletin Boards, Discussion Forums, and more.

Intralogic runs "out-of-the-box", requiring no additional development. It is 100% browser based, using worldwide standard web and database technology from Microsoft and Adobe. Intralogic is open, intuitive and extremely easy to use by all employees: No technical skills are required.

### Key Features

#### Fully Integrated Core Applications

- Intranet, Extranet & Internet Portal
- Content Management
- Document Management
- Online Forms Management
- People Management
- Business Process Automation and Workflow Management
- Enterprise Search

#### Content Management Features

- Content management with familiar WYSIWYG (MS word style) interface
- Multi-language spell checker
- Content versioning, rollback and auditing
- Content check-in, check-out
- Distributed authoring and approval
- No technical skills required

#### Document Management Features

- Document versioning, rollback, auditing and archiving
- Document check-in, check-out with date range publishing
- Distributed document authoring and approval
- Powerful database and free text document searching facilities

## Intralogic V9 Overview

### Online Forms Management Features

- Form builder to create online forms within minutes
- Replace your paper forms and automate your business processes
- Integrated multi-step workflow approval with built in notification and escalation
- Automatic forms data management facility to access, manage and export your form data

### Workflow Management Features

- Workflow builder to create and automate your unique business processes
- Multi-stage workflow with single or multiple people involved at each stage
- Automatic notification, escalation, auditing and history
- Attach workflows to online forms, document processing and/or employees
- Workflow consoles to manage your business processes

### Other Integrated Features

- Communities of information
- People and contact management
- Event calendars
- Online surveys
- Bulk email
- Image libraries
- Menu management
- Organisational charts
- Classified ads and notice boards
- Bulletin boards, online forums and chat rooms
- Resource booking facility
- Statistical usage reporting
- Distributed file management
- Browser based administration
- Multi-site, via a single interface
- Active Directory (ADS) and LDAP integration

### Technology and Interface

- Worldwide standard database and web technologies by Microsoft and Adobe
- Full AJAX interface (Asynchronous Javascript and XML)
- 100% browser based, template and database driven
- Authenticates with Active Directory, NT and other LDAP compliant user repositories
- Cross browser and platform compatible
- Intuitive and easy to use with no technical skills required

# Weblogics

## Intralogic V9 Overview

### Unique Design Features

#### **EASE OF USE**

Intralogic is truly a product where "simplicity" is the key design consideration. All users, regardless of their technical ability, find Intralogic intuitive and easy to use, often without any training. Template driven, browser based, with an intuitive WYSIWYG editor and built-in workflow approval and notification, Intralogic steps users through content management and business processes. It's a natural extension of your work environment. Intralogic is complete and ready to run, with no development required.

#### **INTEGRATED**

Intralogic components are all designed to work together. This includes Content, Documents, People, Forms, Workflow, Searching and Collaboration. You don't need to buy separate products that won't integrate or work well together. And you won't need to spend a fortune developing custom solutions, because Intralogic works right out of the box.

#### **PERSONALISED**

Intralogic delivers the right information to the correct people, effortlessly. Intralogic authenticates all users upon entering the system. The look and feel, access to information and navigation for each type of person is unique and personalised based on their needs and view of the world. This view includes personalised homepages, communities, content, navigation, menus and access to information based on user type and user's authority.

#### **DOCUMENT MANAGEMENT**

A large amount of your corporate knowledge is tied up in documents

and files. Document management is a core Intralogic feature, capturing, managing and sharing your corporate documents and files safely and securely. Intralogic stores extensive information about your documents (sometimes called "meta data"), as well as automatically indexing the content of your documents, so you can use Google-style free text search. Intralogic manages document versioning, rollback, usage statistics, audit trails and document check-in, check-out procedures.

#### **PROCESS AUTOMATION**

Intralogic's online forms builder helps you replace your paper forms with web based electronic forms. You can create online forms in minutes with an extensive set of form field types. When users submit forms, Intralogic captures all the data in its MS SQL Server database. Multi-step workflows manage the approval of form submissions, as well as automatic notifications and escalations. Intralogic automatically builds query forms for finding, filtering and exporting your form data.

#### **WORKFLOW**

Intralogic's multi-step workflow builder creates and manages your business processes and content approvals. A workflow is a series of steps: At each step, you define one or more people who review content or take action. Once a step is complete, Intralogic moves the work item to the next step. Intralogic's built-in workflow management console notifies users so they can act on their workflow tasks. Intralogic provides optional email notifications, and can escalate workflow

# Weblogics

## Intralogic V9 Overview

steps based on business rules you specify. Workflows are encapsulated business processes, and Intralogic can attach them to items such as online forms, content approval, document reviews, people and users.

### SEARCH

Intralogic's search facilities are the most advanced available. You can search for information and content by any combination of database, meta data and Google-style free text searches. Intralogic automatically indexes documents, so users can find information, forms, staff info, in fact all of your corporate knowledge within specific communities or across your whole enterprise.

### COLLABORATION

An Intralogic community is where people and information come together for a common purpose. Communities contain knowledge assets (eg., information, documents, forms, people) and collaboration tools (eg., electronic forms, workflows) specific to the needs of the community. Information across the entire site including content, documents, web pages, forms, people, forums, chat rooms can be linked to one or more communities with a simple click of a button. Communities can be open to all users or restricted to members forming ideal areas of collaboration.

### DISTRIBUTED CONTENT MANAGEMENT

All content management is handled through an easy to use template based interface, popup selection windows, a WYSIWYG MS word style editor and

an automated workflow approval system. Our unique 3 level security model allows for distributed and/or centralised content management. You can assign content management responsibilities or "roles" to people within specific Intralogic communities. The result is a flexible security model that integrates workflow and eliminates content and business process bottlenecks.

### DISTRIBUTED FILE MANAGEMENT

Intralogic uses standard database and web technologies from Microsoft and Adobe. One hundred percent of the content is held in the Intralogic database (except the documents themselves), which is open, accessible and extendable. Importantly, your documents and files are held on the network file system and managed by Intralogic. You can implement Intralogic in single server or multi-server configurations. In multi-server environments, you can separate the Intralogic application (IIS web server) from the database (database server) from the documents and files (file server) to allow for distributed access and load balancing.

### ARCHITECTURE

Our architecture supports distributed file management (DFS). You can turn DFS on or off at any time, with regional file servers at strategic locations (offices, states, countries) to serve documents to local users, greatly reducing network traffic. Each user (eg., a staff member, or an external sub-contractor) has an Intralogic profile which specifies a user's default regional server, and Intralogic automatically

# Weblogics

## Intralogic V9 Overview

manages all document and file replication out to the regional servers.

### SCALABILITY

To provide the most flexibility and openness for our customers, Intralogic uses worldwide standard web and database technologies from Microsoft and Adobe. Intralogic is 100% browser based, template (HTML and CSS) and database driven. Intralogic is "ultra-thin" working well on LAN, WAN and dial-up network infrastructures. The solution performs well in small, medium and large organisations. Scalability options include single server, multi-server, clustering, load balancing and distributed file management that scales to thousands of users.

### AFFORDABLE

Our strategic approach is to provide the best of breed solution that is affordable, easy to install, intuitive to use and has low ongoing costs. Our solution requires no development and works first time every time. It is a complete solution that is ready to run. It comes with a suite of templates that are very popular and fit in well with most organisations.

### AUSTRALIAN

Weblogics and Intralogic are fully owned and operated in Australia with no dependencies overseas or locally. We provide a full suite of professional services along with our world leading solutions.

## INDUSTRY AWARDS AND RECOGNITION

Consensus Awards Winner. Weblogics Intralogic product won the consensus awards. The awards are recognition of the best Australian software products. It was judged by an independent panel of 40 top Australian companies and was sponsored by Microsoft.

Intralogic won based on its innovation, proven performance and benefits and its potential both locally in Australia and Overseas

iAwards Runner Up. Weblogics Intralogic knowledge management solution was runner up in the in the prestigious ICT iAwards. The iAwards brings recognition to companies that have developed world-class products that are inspirational, innovative and proven success stories that are transforming Australia and the world.

The judging criteria are based on product Uniqueness (20%), Quality (20%), Features (25%), Market Potential (25%) and Presentation (10%).
